the committee warns of a major public reaction against radio digital switchover scheduled for 2015 unless the government make the case for switchover and keep the public informed about its impact there is public confusion and industry uncertainty over radio switchover and concern that due to the lack of public information people are still buying analogue radios which will be out of date in a few years time retailers gave evidence stating that they are not getting adequate information on switchover plans so are unable to offer consumers accurate guidance when making purchases the report also points out that car manufacturers are still fitting analogue radios in new cars and digital radios will not be fitted as standard in all cars until 2013 the radio switchover is contrasted with the television switchover programme finding that the benefits of tv switchover were well understood in contrast surveys show that the public are generally happy with the present fm radio system and with the range of programmes that are provided the committee recommends urgent steps on a range of actions including providing a detailed plan for universal digital radio coverage including how it is to be funded developing a policy for the long term use of fm devising a help scheme for radio switchover financed by general taxation rather than the bbc licence fee ensuring new digital car radios are fitted with a multi standard chip to enable their use overseas encouraging radio manufacturers and retailers to devise a sensible scrappage scheme for redundant analogue radios it is also noted that the bbc and government disagree over whether the cost of universal digital coverage of their national stations can be met under the current licence fee the report says that it is essential that a firm and unambiguous plan for funding the completion of build out of the digital radio service is put in place as soon as possible the report concludes reversing current policy would be unproductive given the amount of investment in digital radio already and while the switchover in 2015 is ambitious a change of target date is not favoured at this stage

against the grain of the growing literature on screens screen genealogies argues that the present excess of screens cannot be understood as an expansion and multiplication of the movie screen nor of the video display rather screens continually exceed the optical histories in which they are most commonly inscribed as contemporary screens become increasingly decomposed into a distributed field of technologically interconnected surfaces and interfaces we more readily recognize the deeper spatial and environmental interventions that have long been a property of screens for most of its history a screen was a filter a divide a shelter or a camouflage a genealogy stressing transformation and descent rather than origins and roots emphasizes a deeper set of intersecting and competing definitions of the screen enabling new thinking about what the screen might yet become
